ELECTRIC TANK HEATERS

Indeeco Tank Heaters are used to maintain or raise the temperature of gases and fluids in tanks from -300°F to 1000°F for a variety of applications and industries. These heaters are designed with low-watt density, open coil heating elements for uniform heating of even the most temperature-sensitive materials.

Immersion heaters are ideal for use in direct heating of liquids and gases in a variety of processes for hazardous and non-hazardous locations. Indeeco offers customized wattages with voltages.

Looking for support in choosing the right heater for your application? Contact the ZIRCO sales team!
