# TRUCK OUT AND LOAD OUT BOXES

The truck out and load line boxes created by Secure EnViro provide load line spill containment solutions to save your operation time and money. EnViro-Box designs have streamlined the installation process and made it quicker and easier. What once took hours and two people, now takes 20 minutes with just one person. EnViro-Boxes also help reduce the chance of environmental contaminants spilling onto the surrounding land and water.

The EnViro-Box innovative design incorporates a removable sleeve in the box in place of welding in a threaded or flanged nipple. The EnViro-Box and welded sleeve are slid over the piping, positioned and secured with an inside and outside U bolt for easy installation. EnViro-Boxes also have a latching safety arm to secure the lids when open to keep operators safe. We offer a wide range of truck out and load line EnViro Boxes to fit the needs of your company.

## PIG TRAP SPILL BOX

Pigging is an essential and critical part of your liquids transfer process. Each piece of your pigging process plays a key role in keeping lines clean and flowing at maximum capacity. The Pig Trap Spill Box must be robust enough to stand up to frequent use, easily accessible, static-free and capable of containment of the waxes, solids and liquids that it may receive.

This product has been designed with feedback from industry and is manufactured of the highest quality materials available. Standard models are available for immediate shipment, while custom models can be turned-around relatively quickly.
